hello there, i have a problem with my ubuntu, i have updated it and i have not seen my dual-screen mode, i also tried to install ati proprietary driver but nothing, my cards is a HD6490, any ideas how to get my dual-screen mode dpkg -l |grep xorg my neighbor hit me with a 5.5m long ballong... (pastebin it) ? hmm if you're in Xorg, then you'll probably need to remove your Nvidia graphics driver. Or use the open source driver. ok, but no need to reinstall the whole system right? No. Just remove the nvidia driver. Then you can use the open source driver. ok, i will try that, thx See if that fixes the problem. If it does, then you can install the Nvidia driver. thanks Guest85636, does your dualscreen work with the other ubuntu version? OerHeks, yes, the problem is that i have updated my ubuntu and i have not seen dual screen oh, does the hardware switch not work? not, only when i type dpkg-reconfigure xserver-xorg i see the screen and you have nvidia-current in your list? yes, i will remove that one and i will install the proprietary one, ok? sure ok, rebooting hi hey OerHeks, hey i have no graphic card problem but i cant launch apps 82157476af
