Small and efficient calendar software Very simple setup, no help file or documentation Feature packed with options and customizeability Built in hotkeys provide fast access to the calendar Installs quickly and doesn't consume much memory or CPU What's new in version 1.0.1 of QuickMonth Calendar Cracked Version Fixed: Fixed by this version of QuickMonth Calendar. A bug was causing the calendar's month number display to be off in some cases Description: QuickMonth Calendar is a small software application developed specifically for helping you place a calendar on your desktop. Clean and simple looks By default, the tool automatically shows a minimalist calendar just above the system tray area. The calendar is revealed whenever you hover your mouse cursor over the clock in your system tray. You can access its configuration settings by right-clicking on the calendar. A help manual is not included in the package. However, you can quickly get an idea about how to tweak the dedicated parameters because they look highly intuitive. Work with a calendar The calendar comes packed with basic features and reveals a simple layout. You are offered the possibility to go to the next or previous month, view the current date displayed at the bottom of the calendar, jump to the current date with ease, as well as gain access to a specific year. QuickMonth Calendar gives you the freedom to automatically show the calendar at startup, display week numbers in the calendar, hide today's date revealed at the bottom of the calendar, and reassign a hotkey which can be used for opening the calendar on the fly. Other important configuration settings worth being mentioned enable you to alter the text by adjusting the font, deactivate the keyboard shortcut, disable the mode used for jumping to the current date, set the time in milliseconds used for hover delay actions, as well as change the position of the calendar on the screen by entering the x and y coordinates. What's more, you can automatically hide the calendar and copy the current date (in a long or short format) to the clipboard. Tests have pointed out that QuickMonth Calendar carries out a task quickly and without errors. It does not eat up a lot of CPU and memory resources so you do not have to worry that it affects the

## QuickMonth Calendar License Key Full For PC

(MacWorld) -- Before you start using Apple's new Preview application to edit PDF documents, make sure you download an updated version of Adobe's free Acrobat Reader. Otherwise, you could end up with a frustrating experience. "Acrobat Reader 9.3.0 works smoothly with Preview 3.1, but not vice versa," said Brandon Perry, the editor in chief of the free MacFormat magazine. "Acrobat won't let you open a file using Preview, and Preview will crash when it tries to open a file from Acrobat." This makes Preview a de facto Acrobat viewer and, in turn, prevents users from editing PDF documents using the new application, even though it runs on top of Adobe's own, much faster and less expensive Acrobat product. There have been no reports of other problems using Preview and Acrobat 5.0.1. Preview is available for Mac OS X (10.4.6 and higher) and Windows. The new version of the free software is available at [www.adobe.com/products/acrobat/](http://www.adobe.com/products/acrobat/). PC users can download free Acrobat Reader from [www.adobe.com/acrobat/](http://www.adobe.com/acrobat/). -- MacWorld contributor David Teig [Acrobat Reader 9.3.0] [Preview 3.1] [MacWorld] -- Apple's new Preview application for Mac OS X handles multiple files as an image, but Adobe's free Acrobat Reader X 1.0.6 can't work with a multi-image file. In that case, Apple's new application can only open one file at a time. "When you make Preview 3.1 a default application (and it should be), it opens the PDF document with Acrobat Reader 5.0.1, which runs much more slowly than Adobe's new program," said Brandon Perry, the editor in chief of the free MacFormat magazine. "Since the new version of Acrobat Reader can't handle a PDF file containing multiple pages, even the new version of Preview won't work with it." Mac users can install and run both Preview and Acrobat Reader 5.0.1 free of charge. [MacBookPro] -- Apple's new MacBook Pro laptops, which go on sale on Friday for as low as \$1,799, are getting plenty of rave reviews. But one thing is commonly overlooked: The webcams on the models that have been tested so far don't work.
